

Shareholder Resolution at the 2022 AGM of Phillips 66 Corporation

Coordinated by Follow This

WHEREAS: We, the shareholders, must protect our assets against devastating climate change, and we therefore support companies to substantially reduce greenhouse gas (GHG) emissions.

RESOLVED: Shareholders support the company to set and publish targets that are consistent with the goal of the Paris Climate Agreement: to limit global warming to well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1.5°C.

These quantitative targets should cover the medium- and long-term greenhouse gas (GHG) emissions of the company's operations and the use of its energy products (Scope 1, 2, and 3).

Shareholders request that the company report on the strategy and underlying policies for reaching these targets and on the progress made, at least on an annual basis, at reasonable cost and omitting proprietary information.

You have our support.

SUPPORTING STATEMENT:

The policies of energy companies - the largest greenhouse gas (GHG) emitters - are crucial to confronting the climate crisis. Therefore shareholders support oil and gas companies to substantially reduce their emissions.

We, the shareholders, understand this support to be essential in protecting all our assets in the global economy from devastating climate change.

We therefore support the Company to set emission reduction targets for all emissions: the emissions of the company's operations and the emissions of its energy products (Scope 1, 2, and 3). Reducing Scope 3 emissions, the vast majority, is essential to limiting global heating.

Scientific consensus

The world's leading international scientific bodies recently released reports which clearly state the need for deep cuts in emissions in order to limit global warming to safe levels.

Financial momentum

A growing international consensus has emerged among financial institutions that climate-related risks are a source of financial risk, and therefore limiting global warming is essential to risk management and responsible stewardship of the economy.

Backing from investors that insist on targets for all emissions continues to gain momentum: 2021 saw unprecedented investor support for climate resolutions. In the US, three of these climate resolutions passed with a historic majority. In Europe, support for these climate resolutions continued to build.

Legal risk

In 2021, a Dutch court ordered Shell to severely reduce their worldwide emissions (Scope 1, 2, and 3) by 2030. This indicates that oil majors and large investors have an individual legal responsibility to combat dangerous climate change by reducing emissions and confirms the risk of liability.

We believe that the Company could lead and thrive in the energy transition. We therefore encourage you to set targets that are inspirational for society, employees, shareholders, and the energy sector, allowing the company to meet an increasing demand for energy while reducing GHG emissions to levels consistent with curbing climate change.
